Singapore-based ANTLabs Counts National InfoComm Awards as Key Milestone on the Road to Global Success

SECURITE picked as 'Most Innovative Infocomm Product/Service', cements ANTLabs position as industry-leading player

SINGAPORE, 14 October 2008. Advanced Network Technology Laboratories (ANTlabs) today announced that SECURITE - a security solution that unobtrusively, yet effectively protects the end user till the last point of transaction - was awarded the prestigious National InfoComm Award for Most Innovative product/service.

"We built this product to respond to an identified vulnerability in the customer transaction journey," explained said Kwang Tat Ang, CEO, ANTLabs. "As a company, we spend more than 20% of our revenue in R&D and it is gratifying to have our efforts recognised as the industry's most innovative solution."

The win at the National InfoComm Awards rounds out a positive year for ANTLabs which announced two major wins including Changi Airport's deployment of SECURITE and a deployment of its wireless solutions by Belgian-based wireless provider, Citymesh. Global recognition for ANTLabs was not far behind. In May this year, leading international industry title, Info Security Products Guide awarded SECURITE "Best Deployment Scenario Award for Integrated Security Software 2008" while its Chief Executive Officer Kwang Tat Ang was honoured with the "Shaping Info Security 2008 Industry Award" beating out global competitors.

About SECURITE

SECURITE is the first proactive transaction-based online security suite which prevents security breaches before they occur. It is free to download and use for home users, but is available at a very reasonable fee for business users. It also presents a compelling argument for consumers to complete the 'last mile' in transacting online when they might have been previously averse to doing so because of the potential risks. SECURITE also benefits users as it:

- Reduces downtime and infections of corporate/personal workstations through real-time monitoring and constant vigilance.

Connectivity Made Easy

- Provides online retailers and customers a secure means to conduct business over the web and presents a uniquely identifiable symbol of safe shopping online.
- Employs white-listing – transaction-based, not system-wide, operates by blocking access, no scan required and utilizes less resources
- Is easily deployed/maintained and seamlessly integrated into existing systems

The solution can be downloaded free from: www.securitelive.com

About the National InfoComm Awards

The Most Innovative InfoComm Product/Service category recognises Singapore registered organisations and companies that have developed innovative Infocomm product(s) or high quality Infocomm service(s) in Singapore. The winning product or service should have conclusively demonstrated an important contribution to improved productivity and/or profitability. More information about the National InfoComm Awards can be found at <http://www.nia.org.sg>

About ANTlabs

Advanced Network Technology Laboratories (ANTlabs) innovates and develops Consumer Endpoint Security Solutions and end-to-end secured network access products for Financial Services, online retailers, Telco, Enterprise and Hospitality industries. ANTlabs are world renowned for our robust gateway solutions used by major telecommunications operators and hospitality institutions worldwide. Today, ANTlabs is a substantial market leader in Singapore, Indonesia, Malaysia, Vietnam and Thailand, with growing presence in North America, China and the Middle East. ANTlabs provides zero configuration endpoint security products that protect Internet users against malware and other Internet borne threats.
